

JOÃO HENRIQUE DE FREITAS QUEIROZ

Software Developer

jo-henrique8@hotmail.com • <http://linkedin.com/in/jhenriquefq> • <https://github.com/Jhenrique44> • São Paulo, SP, Brasil

Summary

Software developer with over 3 years of experience, primarily in frontend development, focusing on creating modern applications based on the Vue.js JavaScript framework. I also work on backend application development, creating APIs in Java with the Spring Boot ecosystem. I have experience in developing highly scalable systems and collaborating with multidisciplinary teams, demonstrating strong interpersonal and teamwork skills.

Experience

Huawei	Sorocaba - SP
Software Developer	08/2023 - 03/2025

- Development and maintenance of logistics systems using Vue.js, Javascript, HTML, and CSS, responsible for controlling extra costs in all operations in Brazil, increasing visibility and financial control.
- Create and integrate REST APIs in Java with Spring Boot, resulting in significant performance gains and reduced request response time.
- Support and participation in the migration of the PostgreSQL database, optimizing queries and implementing caching, which reduced SQL queries responses time by 30%.
- Played a key role and initiative to transaction legacy systems to modern interfaces, refactoring applications using Vue.js and integration APIs in Node.js, applying principles of responsiveness and scalability, which significantly improved the user experience, increasing in 15% requests for new projects.
- Developed an automated fiscal platform for invoice registration, eliminating manual tasks, reducing compliance risks, and improving overall efficiency.
- Created a cargo transport verification system, automating the payment and billing approval process, which cut processing time by up to 80%.
- Provided client support and collaboration, participating in requirements gathering, expectation alignment, and delivery follow-ups, ensuring that solutions met client needs and project goals.
- Used Git for version control and applied Agile methodologies (Scrum and Kanban) to organize tasks and manage project deliveries.

Huawei	Sorocaba - SP
Web Developer - Intern	08/2021 - 07/2023

- Developed the company's Supply Chain Management system using Vue.js and JavaScript, which increased logistics process efficiency by approximately 30%.
- Created and consumed REST APIs, enabling smooth integration between systems and improving the reliability and scalability of developed solutions..
- Automated internal workflows through low-code platforms, significantly reducing repetitive manual tasks and streamlining operational processes.
- Produced and maintained technical documentation covering architecture, requirements, and solution flows, which facilitated alignment between technical and business teams.

Education

Faculdade de Engenharia de Sorocaba (FACENS)	Sorocaba - SP
Specialization Software Architecture	01/2024 - 12/2025
Faculdade de Engenharia de Sorocaba (FACENS)	Sorocaba - SP
B.E. Computer Engineering	01/2019 - 12/2023
